## EXTERNAL FEATURES of the FETAL PIG

- For this assignment you will observe external features on your fetal pig and define them on this page.
- Then you will label your Fetal Pig Drawings, using Page 7 of the Dissection Guide.
- First make sure your drawing is labeled with all labels on this page of the Dissection Manual. Then add all External Feature Terms on this page (except urogenital papilla if you have a male pig). Some features may have two labels/names, for example pinnae is the same thing as the outer ears.
- Then as a review label: Dorsal/Superior for the pig as well as Ventral/Inferior.
- \*Everyone needs to pass in their own paper of defined terms. Pass in your group Fetal Pig Drawings.

*External features (pgs. 5 – 9):*

**Snout:**

**External Nares:**

**Pinnae:**

**External auditory meatus:**

**Nictitating membrane:**

---

**Umbilical cord:**
